Eliminates Trip Hazard at Attic Entrance

Effective R-Value 13 97% Radiant Heat Reflective

Noise Barrier 19 DB Reduction

Class A/Class 1 Fire Rated

Code Compliant

Virtually Eliminates Drafty Attic Openings

ENERGY SHIELD I: INSTALLATION INSTRUCTIONS

Tools Required:

Purchase a small tube of silicon caulking (Available in a squeeze tube from you local home improvement store).

1. Remove the Energy Shield I from the shipping box and packing bag.
2. Unfold the Energy Shield I
3. Open the attic access pull-down stairway and extend the ladder to the floor.
4. Apply a bead of silicon caulking around the inside of the framework just above the pull-down stairway frame.
5. Open the Energy Shield I up with the front section zipper pulls facing toward the floor and at the hinged end of the folding stairway.
6. Push the sides of the perimeter wall against the inner framework where you had previously applied the bead of silicon caulking and press in place. Make sure the Energy Shield I side, front, and rear sections are attached to the inside of the framework and the perimeter wall is pushed down against the pull-down stairway frame as far as it will go.
7. Recheck the perimeter wall to ensure that all sections are adhered to the framework. (Place some staples at the corners if you plan to use the Energy Shield before the caulking is cured (24 hrs.).
8. Let the silicon setup for 24 hours to cure.
9. You can now begin using the Energy Shield for access to the attic anytime you want to.
10. Your new Energy Shield starts saving you on your energy bill right away.

Thank you for your business.
